Automated Water Metering - DRAFT

Kellie Gillingham – Water Master

November 29, 2023

Important Definitions

- Metering – often a catch-all term for measuring, recording, and reporting water use
- Required metering – metering required by the Department of Ecology
- Automated metering is a sub-set of metering

Important Definitions Continued

- Meter readings can be automatically logged with the right equipment
- Telemetry a catch-all term for networked data collection
- Telemetry can be real or near-real-time
- Cellular Telemetered Meters use a cellular network to transmit data automatically

Ecology's Authority to Require Metering

- RCW 90.03.360
- WAC 173-173
- Case Law

What is Automated Metering?

- Many water users measure their water use for multiple reasons
- Some water users are required to report to Ecology
- An automated metering system collects, records, and transmits water use data at a set schedule.
- Technologies can vary
- Ecology isn't always the recipient of automated metering data

Does automated metering
make sense for my
situation?

Will I have Cell Service and Power?

What do Automated Meters Cost?

- Situation dependent
- Size of infrastructure and number of meters
- Fixed vs ongoing costs (manufacturer dependent)
- Talk to several manufacturers when deciding what is best
- Check in with Ecology

Examples of Automated Meters and the Interface
